Altergis tells us: Impulse backed up by reasoning ...

G Leseur

> Everything began with love at first sight...

Gérard Leseur: I discovered Marseille at the age of seventeen, and said to myself that one day I will live here. This was genuine love at first sight. My dream finally came true in 2000 after I decided to leave the Véolia group, when Proserv, a company specialised in the maintenance and operation of heating systems, was created in Marseille. Therefore, the decision to set up in Marseille was primarily a personal rather than a strategic choice.

> ... To become a story of energy!...

But after one year existence, Proserv's growth enabled us to go further and to broaden our action field by building up a chain of trades in the energy field based on engineering, design, installation, operation and maintenance. To achieve this, we set up strategies to purchase a number of companies specialised in these fields:

- ITA for engineering,
- BGR and Lions for works and installation,
- Positif for activities related to generation of electricity with motors,
- Suméria, specialised in renewable energies,
- the Hélios Group, a leader in management of water and water treatment in Quebec.

Since 2001, these activities have been grouped together in the Altergis holding that now employs more than 200 persons.

> ... With an attractive family in its portfolio!

Nowadays, all these companies are distributed in the three clusters, according to their specialties. The purpose of the engineering cluster is to assist our customers in a sustainable development approach and in their development projects in the energy and fluids fields.

The construction cluster builds different types of installations, heat production units, electricity generating sets, air, water, electricity networks, etc.

Finally, the Energy-Maintenance cluster specialises in maintenance of our customer's installations. Our development is continuing around these three clusters with the recent acquisition of companies installed in Romania and in Overseas Departments and Territories.
