

40-30 tells us

Le site de meyreuil

> 4 fields of expertise

Saïd Bougja: « Our Company's first activity was in the microelectronics field and then, based on this experience, we expanded our activities to include the maintenance and repair of high technology equipment. 40-30 now specialises in four fields of expertise, namely vacuum technology, electronics/radio frequency, cleaning (ultra-clean reconditioning) and customer support. Our know-how has earned us a place in France working for large customers such as EADS, Sagem, Thales and STMicroelectronics.»

> 9 sites

40-30 works on a specific, dynamic and competitive activity sector that has encouraged the group to develop its activity and its sites in France and in other countries. As a result of this strategy, we can offer our customers a more local service and better reactivity, so satisfy their needs efficiently. Our first offices were in the Grenoble region, and then afterwards we opened our first site in the Paris region at Les Ulis in 1996. The next step in our development was to open three other centres in the Grenoble region close to our head office and new sites in Tours, Toulouse, Saint-Gény Pouilly (workshop on the LHC site at CERN near Geneva), Meyreuil and then Singapore as our international branch.

> *Roots and wings*

The Meyreuil site was chosen because of its proximity to STMicroelectronics, one of our first customers. It offered better operating flexibility and an opportunity to develop our range of services to the Group. At the same time, we started to work with other companies located in the Provence-Alpes-Côte d'Azur region such as ATMEL in Rousset, Thales Alenia Space in Cannes and Air Liquide in Sophia- Antipolis and Montpellier. Our geographic situation is an ideal starting point to reach anywhere in the region.

> *Partners and means!*

This site also satisfies our ambition to increase diversification of our activities. This is why we invested 100 000 € in new equipment with the assistance of local partners (Charbonnages de France, Pays d'Aix Développement, DRIRE (Regional Directorate of Industry, Research and the Environment) in 2005 and in 2006. We now have the means necessary to consolidate microelectronics, our first activity, that still accounts for 80% of our sales and to propose new services in food processing and in the pharmaceutical, chemicals and aeronautical industries, all of which are strong in the region ...
